Laura Puschitz

NPI Engineer · Costing Processes · Manufacturing Optimization · Process Automation

Luftenberg an der Donau, Austria | l.puschitz@outlook.com | lpuschitz.github.io

Profile

Electronics and IT professional with hands-on experience since 2014, starting with a dual apprenticeship and continuing in hardware testing and NPI. Currently working independently on calculating and validating material and manufacturing costs, assessing technical feasibility and transferring electronic products into production. Strengths include manufacturing process improvement, cross-functional coordination and data-driven process automation.

Professional Experience

NPI Engineer

Kontron Austria GmbH | 09/2025 – present

- Since starting as an NPI Engineer, I have handled around 100 costing and feasibility cases. I have independently used existing costing templates and adapted them to the products and manufacturing processes involved. I have also regularly reviewed supplier quotations for Purchasing and personally granted technical approval.
- Reviewed bills of materials, specifications and manufacturing processes for technical manufacturability and cost implications; agreed on component alternatives and changes with customers to resolve manufacturing issues.
- Coordinated around 15 prototype-to-series production handovers, including technical clarifications, approvals, and manufacturing and process documentation.
- Technical interface between Sales, Purchasing, Supply Chain, Quality, Production, suppliers, and industrial and OEM customers; coordinated feasibility, product changes and manufacturable solutions.

Additional role: ESG Data Collection Coordinator & Process Automation

Kontron Austria GmbH | since 09/2025

- Independently automated ESG data collection, processing and material categorization using Excel, Power Query, Power BI and Power Automate; saved approximately 30 working hours per annual ESG reporting cycle (January to March), supported by traceable records.
- Prepared ERP exports and datasets with more than 17,000 rows; coordinated data collection across Controlling, Production, Logistics, Quality Management, Management and Accounting.
- Designed and developed an NPI costing workflow using Microsoft Power Platform; go-live planned for Q4 2026. Maintained three self-developed Microsoft 365 Copilot agents in productive use.

Senior Hardware Test Engineer

eurofunk KAPPACHER GmbH | 09/2018 – 09/2025

- Independently developed and optimized automated test concepts and test-adapter hardware for PCBAs, electronic devices, embedded systems, communication devices and control units.
- Improved test and diagnostic processes: reduced one device's test time from around 13–15 to 7–8 minutes; implemented measures that contributed to a reduction in average repair time of around 25%.
- Analyzed manufacturing and component issues; coordinated documented test processes with Production and Hardware Development using Jira and Confluence.

Additional Responsibilities & Project Examples

Apprenticeship Training in Production

eurofunk KAPPACHER GmbH | 2020 – 2025 | Additional role

- Supervised around 10–17 apprentices in electronics manufacturing and testing; assigned tasks, gave feedback and explained technical concepts. Completed the WIFI apprenticeship-trainer course, including its professional assessment interview.
- Presented production and quality topics; lead presenter for an introduction to the Production department and QA team to around 150 people.

Selected Projects

NPI Costing Automation. Technical design and development of a workflow using Power Automate, SharePoint and other Microsoft tools; testing/introduction phase, with go-live planned for Q4 2026.

Hardware Test Systems. Automated tests and test-adapter hardware to standardize test processes, reduce manual steps and shorten test times.

Core Skills

Costing & Economics. Material and manufacturing costs, cost plausibility checks, adapting existing cost models, bill-of-materials/BOM costing, feasibility analysis.

Electronics & Manufacturing. PCB/PCBA, NPI, prototype-to-series transfers, component analysis and alternatives, manufacturing processes, technical fault analysis, quality and test documentation.

Data & Automation. Excel/VBA, Power Query, Power BI, Power Automate, SharePoint, Planner, ERP data exports and mapping, Microsoft Dynamics NAV, an older SAP version.

Communication & Coordination. Technical customer communication in German and English; collaboration with Purchasing, suppliers, Production, Development and Quality; presentations, Jira, Confluence.

Education & Training

Dual Apprenticeship (2014–2018). Applied Electronics and Information Technology (IT-Technik), eurofunk KAPPACHER GmbH; two completed apprenticeship qualifications.

Vocational Matriculation Examination (2017–2023). Berufsreifeprüfung, BFI/WIFI Austria.

University Studies (2024–2025). Applied Electronics and Information Technology (BSc programme), JKU Linz; discontinued without a degree.

Apprenticeship Trainer Course. WIFI Austria; completed, including the professional assessment interview.

Languages

German: native. | English: B2–C1 (self-assessed); regular technical communication with international contacts.
