# Laura Puschitz

*Application and Solutions  Software and Automation  Electronics*

Luftenberg an der Donau, Austria | l.puschitz@outlook.com | github.com/lpuschitz

## Profile

Electronics & IT professional with hands-on experience in NPI, electronics manufacturing, automated testing, technical customer communication and process automation. I combine practical electronics knowledge with software and automation skills and am focusing my career on application, solutions and software-oriented roles.

## Professional experience

### NPI Engineer

Kontron Austria GmbH | 09/2025 - present

- Coordinate prototype-to-production transitions for electronic products, including BOM costing and technical feasibility analyses. Completed 100 BOM costing/feasibility cases and 15 production handovers, including documentation and coordination.
- Act as a technical interface for industrial customers, international customers and OEMs via e-mail, phone and Teams. Clarify questions and recommend solutions concerning feasibility, PCB/PCBA, product changes, BOMs, manufacturing problems and specifications.
- Coordinate prototype builds, approvals and resolution of issues that could prevent series production before NPI release. Work with Sales, Purchasing, suppliers, Quality and Production on technical and manufacturing issues.

### ESG Data Collection Coordinator

Kontron Austria GmbH | 09/2025 - present | additional responsibility

- Prepare and consolidate ESG data for group reporting, including analysis of datasets with more than 17,000 rows. Coordinate collection across Accounting, HR, Facility Management, IT and Procurement.
- Use Power Automate, Power BI, Power Query, SharePoint, Excel/VBA and Planner to standardize and automate workflows. Implemented an automated NPI costing workflow with Sales and Purchasing interfaces and monitoring via Planner.

### Senior Hardware Test Engineer

eurofunk KAPPACHER GmbH | 09/2018 - 09/2025

- Developed and optimized automated test systems for PCBAs, complete devices, embedded systems, communication systems and control units. Designed test concepts and test-adapter hardware for newly developed assemblies.
- Automated tests covering digital audio, I/O, NF, HDMI, USB, relay outputs, codecs, voltage/current, reset, configuration and status readout.
- Reduced one device test time from approximately 13-15 minutes manually to approximately 7-8 minutes through automation and test-process optimization. Reduced manual work, unnecessary reconfiguration and repeated steps.
- Used Jira with hardware development and Confluence for technical and test documentation. Worked with Production on manufacturing problems and transferred manual tests into process-compliant, documented workflows.

## Professional experience continued

### Apprenticeship Trainer in Production

eurofunk KAPPACHER GmbH | 2020 - 2025 | additional responsibility

- Completed the official WIFI Austria apprenticeship-trainer course including professional interview. Independently supervised approximately 10-17 different apprentices, typically for 1-3 months each.
- Explained work processes, electronics, test systems and production processes; assigned and checked tasks, gave feedback and supported problem solving.
- Regularly presented technical topics and manufacturing problems to managers and colleagues; presented an internal department topic to approximately 150 people and an apprentice project to the Managing Director and technical supervisors.

## Selected projects

**Automated Hardware Test Systems.** End-to-end development of automated test concepts and test-adapter hardware for newly developed electronic assemblies, with a focus on minimizing manual actions and repeated configuration.

**NPI Process Automation.** Automated parts of the NPI costing workflow with interfaces to Sales and Purchasing and monitoring via Planner.

**Gerber DFM and DFA Analyzer.** Python concept and first prototype for rendering Gerber data, checking configurable design rules, and generating component counts and categories.

## Core skills

**Application and solutions.** Technical customer communication, requirements clarification, feasibility, solution recommendation, technical presentations, cross-functional coordination, technical sales support.

**Electronics and manufacturing.** PCB/PCBA, NPI, BOM, costing, prototype builds, production handover, manufacturing problems, specifications, embedded systems, communication systems, controls.

**Software and automation.** Python, Java, C++ test-environment exposure, Power Automate, Power BI, Power Query, SharePoint, Excel/VBA, Planner.

**Tools.** Jira, Confluence, Multimeter, Oscilloscope, Logic Analyzer, Electronic Load, CAN Analyzer, JTAG, Frequency Generator.

## Education and training

**Dual apprenticeship.** Angewandte Elektronik + Informationstechnologin-Technik (IT-Technik) | 2014-2018

**High school diploma.** Evening school, Salzburg | 2017-2023

**BSc studies.** Applied Electronics and Information Technology, JKU Linz | 2024-2025 (discontinued)

**Apprenticeship Trainer Course.** WIFI Österreich | completed including professional interview

## Languages

German: native. English: B2-C1; regular technical communication with international customers and colleagues.

## Career direction

Application Engineer, Technical Application Engineer, Solutions Engineer, Technical Solutions Engineer, Technical Consultant, Software/Automation Engineer, QA/Test Automation Engineer, Engineering Tools Developer, Manufacturing Software Engineer, Technical Product Specialist.
